

# Build a simple application with Data Access using Spring & Spring JDBC, Spring ORM

# Objectives

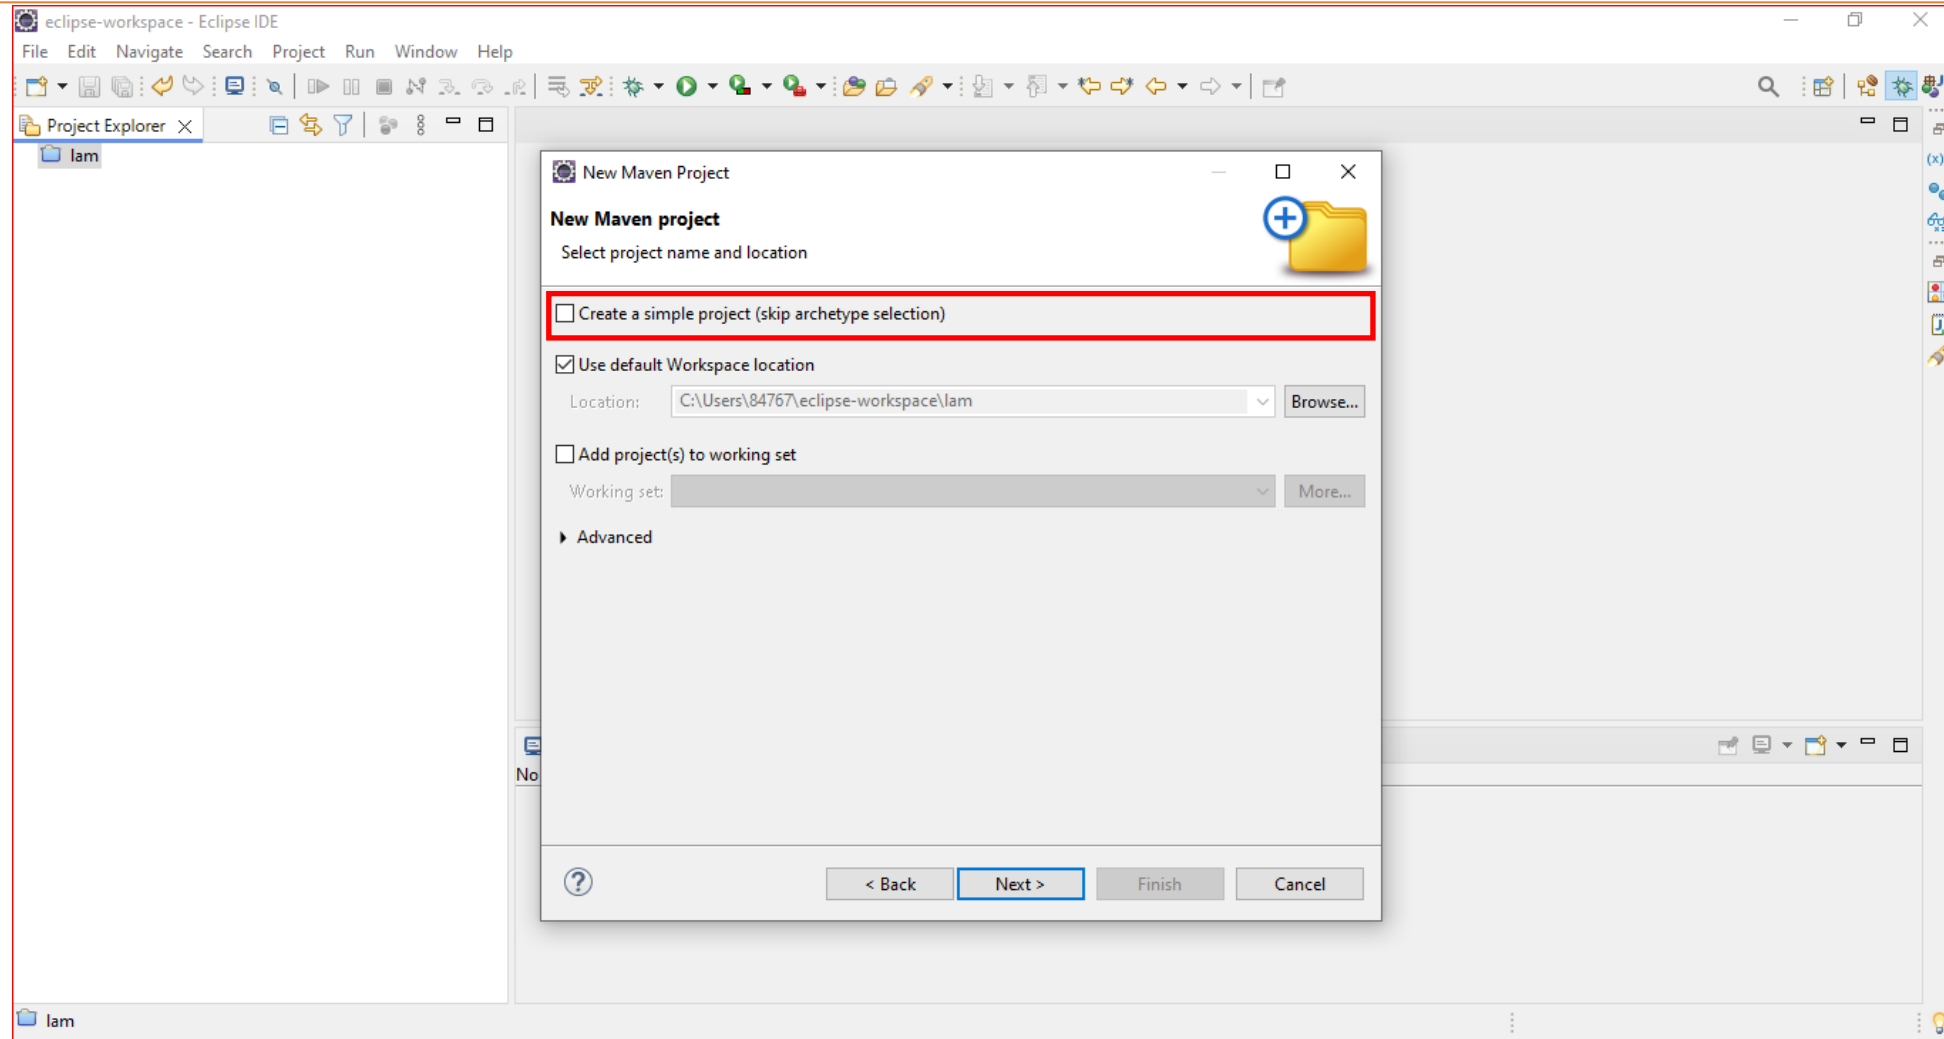

Build Desktop application with Data access

- ◆ Create a new Maven project in Eclipse IDE
- ◆ Add the necessary dependencies for Spring MVC and data access
- ◆ Create the Model - Define the entity classes that represent domain objects
- ◆ Define the data access object (DAO) interfaces and their implementations for interacting with the database.
- ◆ Create the Controller
- ◆ Set Up the Views
- ◆ Create the views using JSP, Thymeleaf, or another templating engine
- ◆ Implement the Business Logic
- ◆ Testing
- ◆ Run the Application

# 1. Open Eclipse, File | New | Maven Project

## 2. Check Create a simple project -> Browse Project -> Next

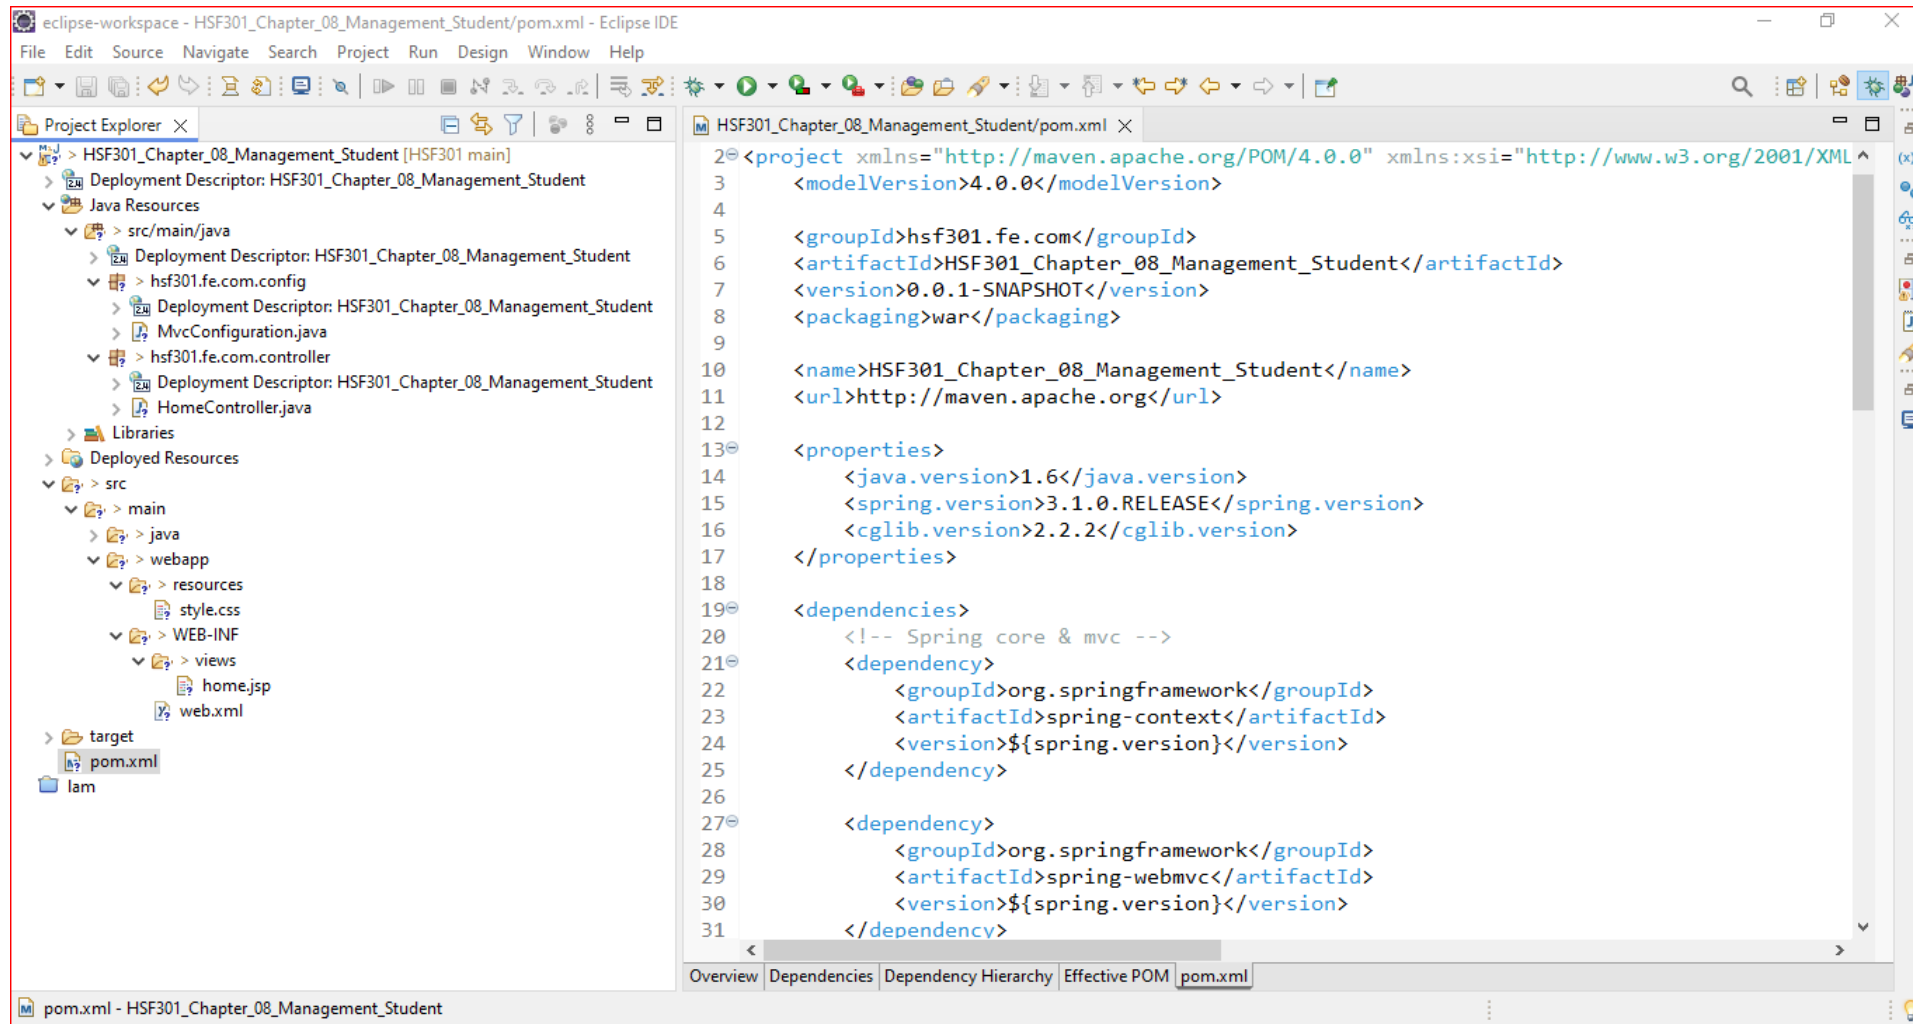

### 3. Fill the information Project -> Click Finish

## 4. Fill the information Project -> Click Finish

## 5. Structure of Maven Project

The screenshot displays the Eclipse IDE interface for a Maven project named "HSF301\_Chapter\_08\_Management\_Student". The Project Explorer on the left shows the project structure, including the following components:

- HSF301\_Chapter\_08\_Management\_Student [HSF301 main]
  - Deployment Descriptor: HSF301\_Chapter\_08\_Management\_Student
  - Java Resources
    - src/main/java
      - Deployment Descriptor: HSF301\_Chapter\_08\_Management\_Student
      - hsf301.fe.com.config
        - Deployment Descriptor: HSF301\_Chapter\_08\_Management\_Student
        - MvcConfiguration.java
      - hsf301.fe.com.controller
        - Deployment Descriptor: HSF301\_Chapter\_08\_Management\_Student
        - HomeController.java
    - Libraries
    - Deployed Resources
    - src
      - main
        - java
        - webapp
          - resources
            - style.css
          - WEB-INF
            - views
              - home.jsp
              - web.xml
      - target
        - pom.xml
      - lam

The main editor shows the `pom.xml` file with the following XML content:

```
<?xml version="1.0" encoding="UTF-8" ?>
<project xmlns="http://maven.apache.org/POM/4.0.0" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation="http://maven.apache.org/POM/4.0.0 http://maven.apache.org/maven-v4_0_0.xsd">
    <modelVersion>4.0.0</modelVersion>
    <groupId>hsf301.fe.com</groupId>
    <artifactId>HSF301_Chapter_08_Management_Student</artifactId>
    <version>0.0.1-SNAPSHOT</version>
    <packaging>war</packaging>

    <name>HSF301_Chapter_08_Management_Student</name>
    <url>http://maven.apache.org</url>

    <properties>
        <java.version>1.6</java.version>
        <spring.version>3.1.0.RELEASE</spring.version>
        <cglib.version>2.2.2</cglib.version>
    </properties>

    <dependencies>
        <!-- Spring core & mvc -->
        <dependency>
            <groupId>org.springframework</groupId>
            <artifactId>spring-context</artifactId>
            <version>${spring.version}</version>
        </dependency>

        <dependency>
            <groupId>org.springframework</groupId>
            <artifactId>spring-webmvc</artifactId>
            <version>${spring.version}</version>
        </dependency>
    </dependencies>
</project>
```

## 6. Right Click -> Run On Server

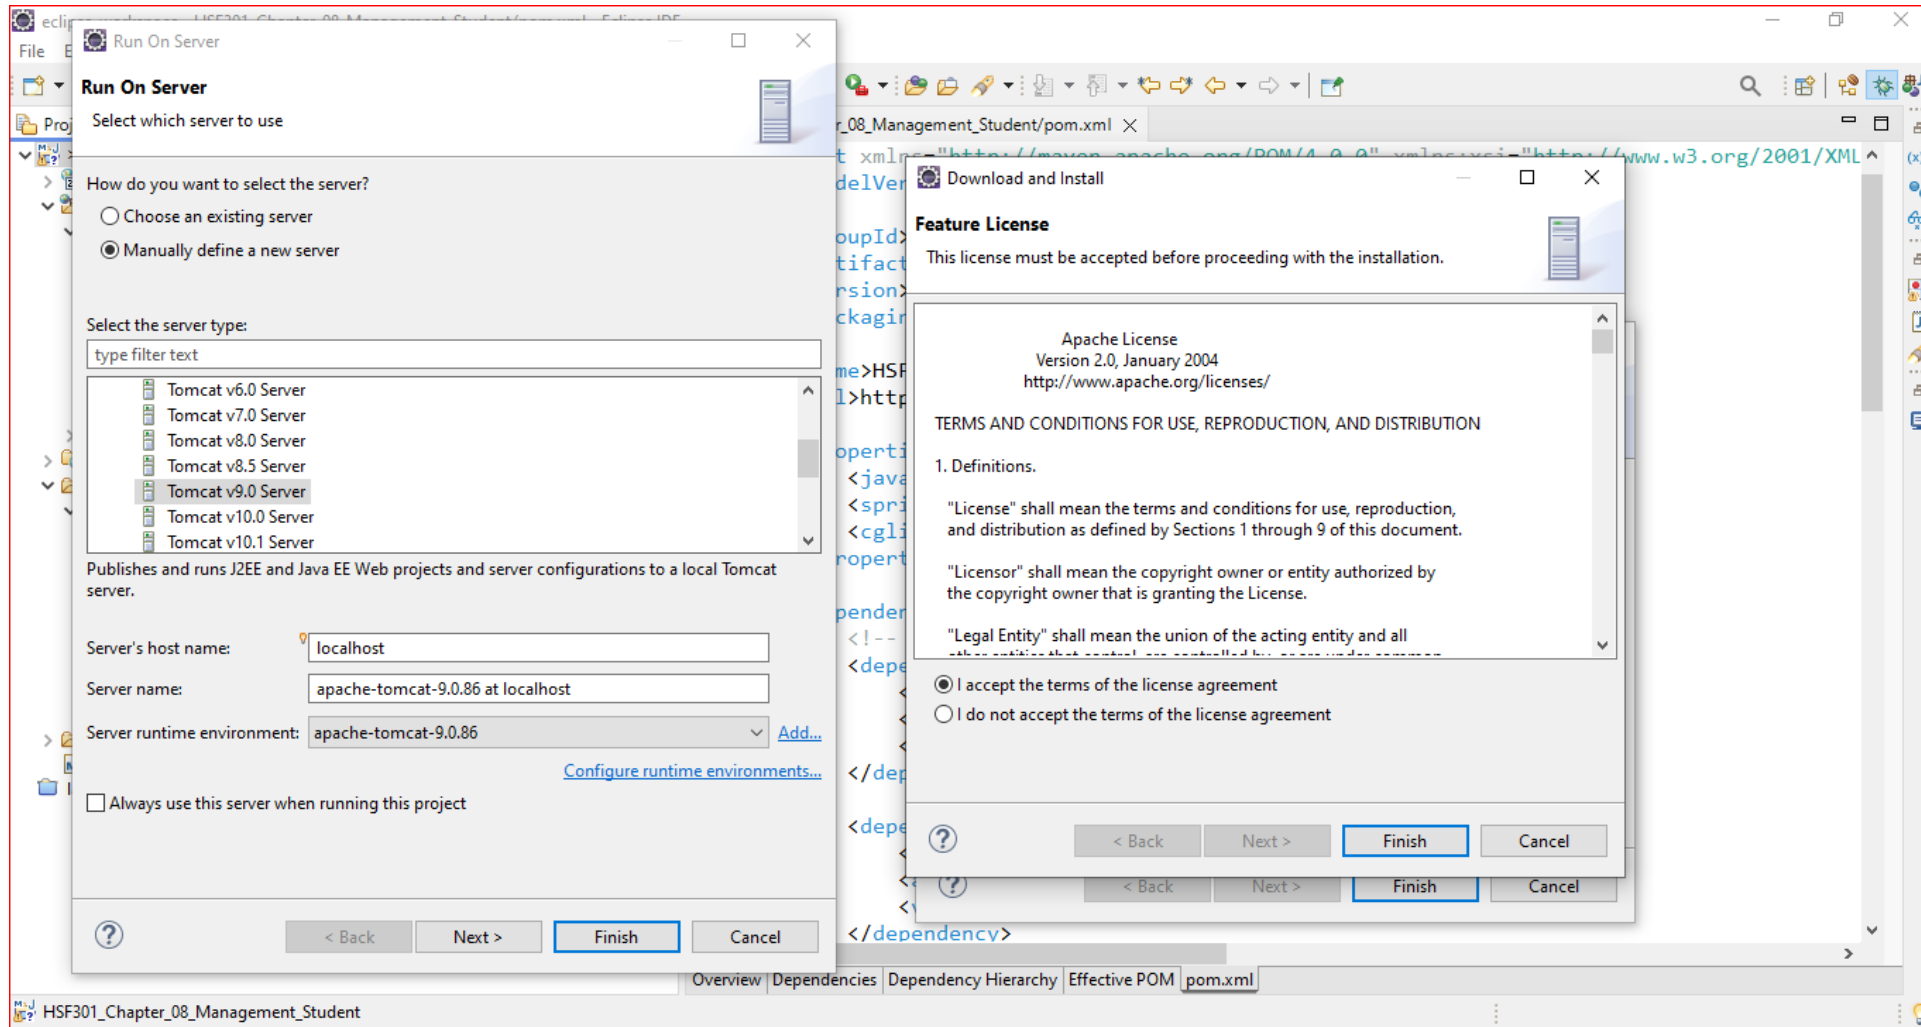

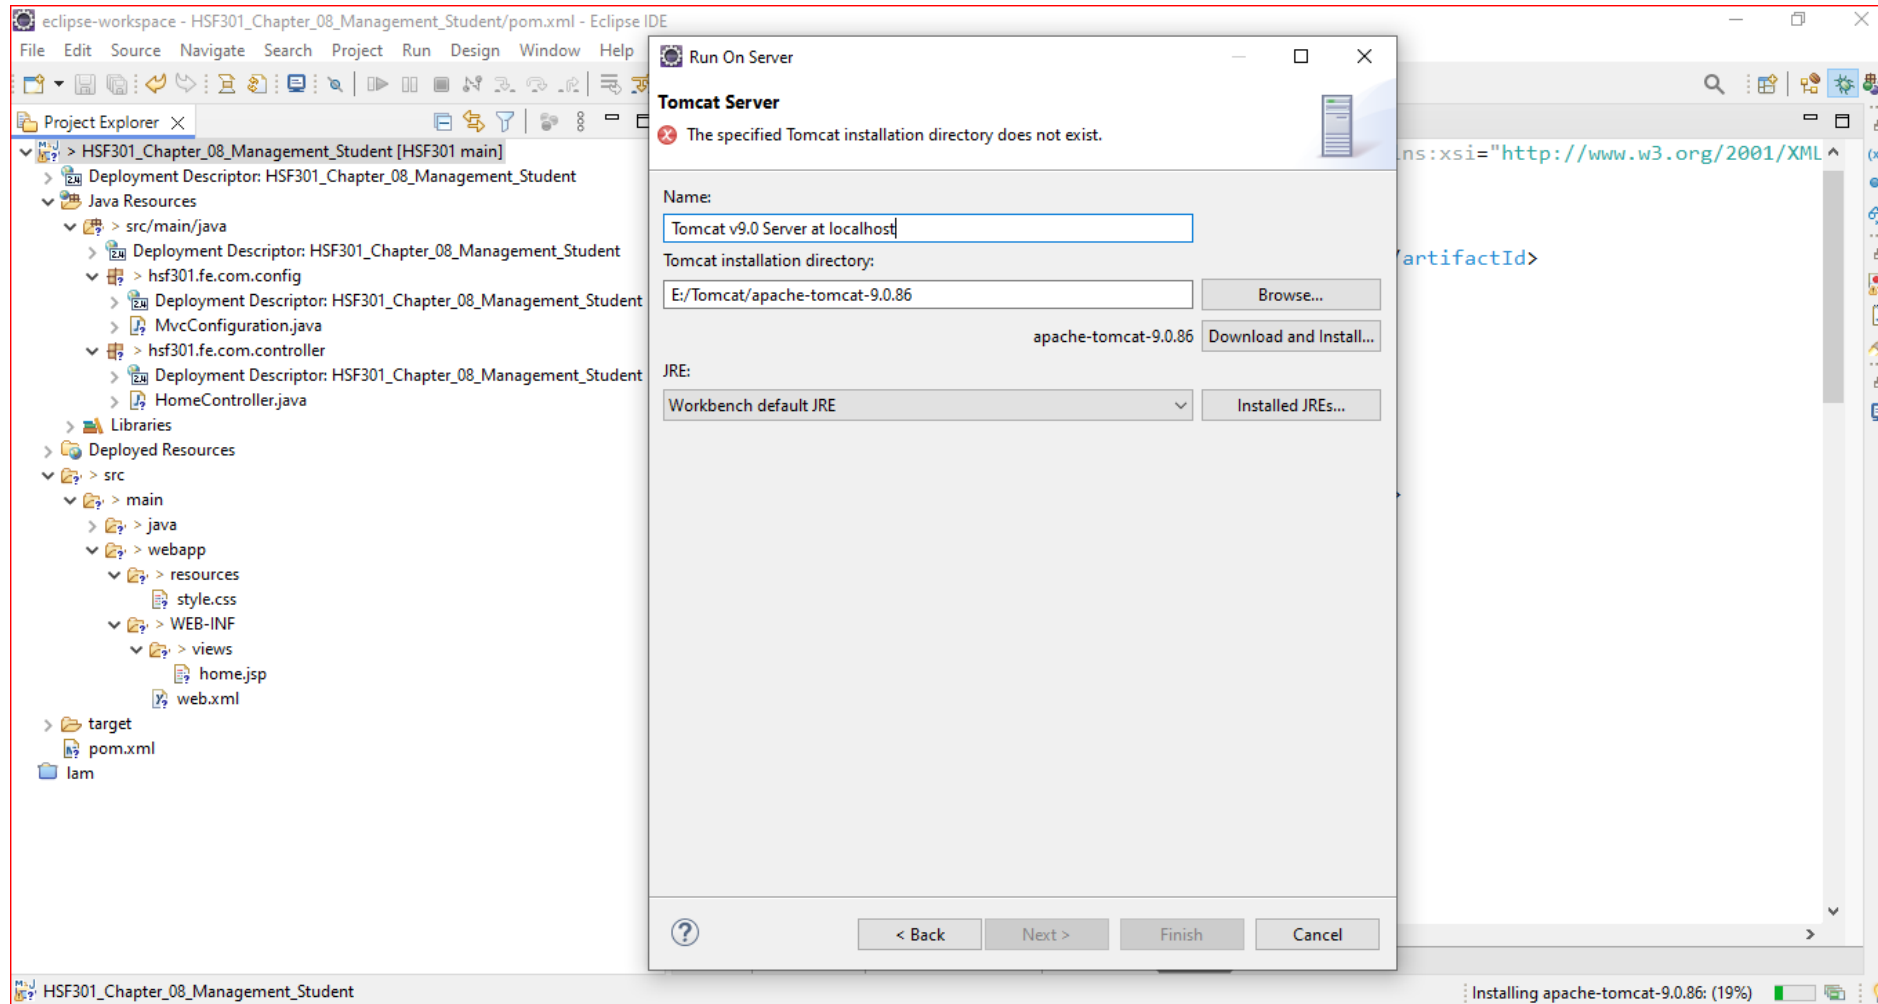

## 7. Browse the Server Location

## 8. Click Download and Install

## 9. Next -> Finish

# 10. Result

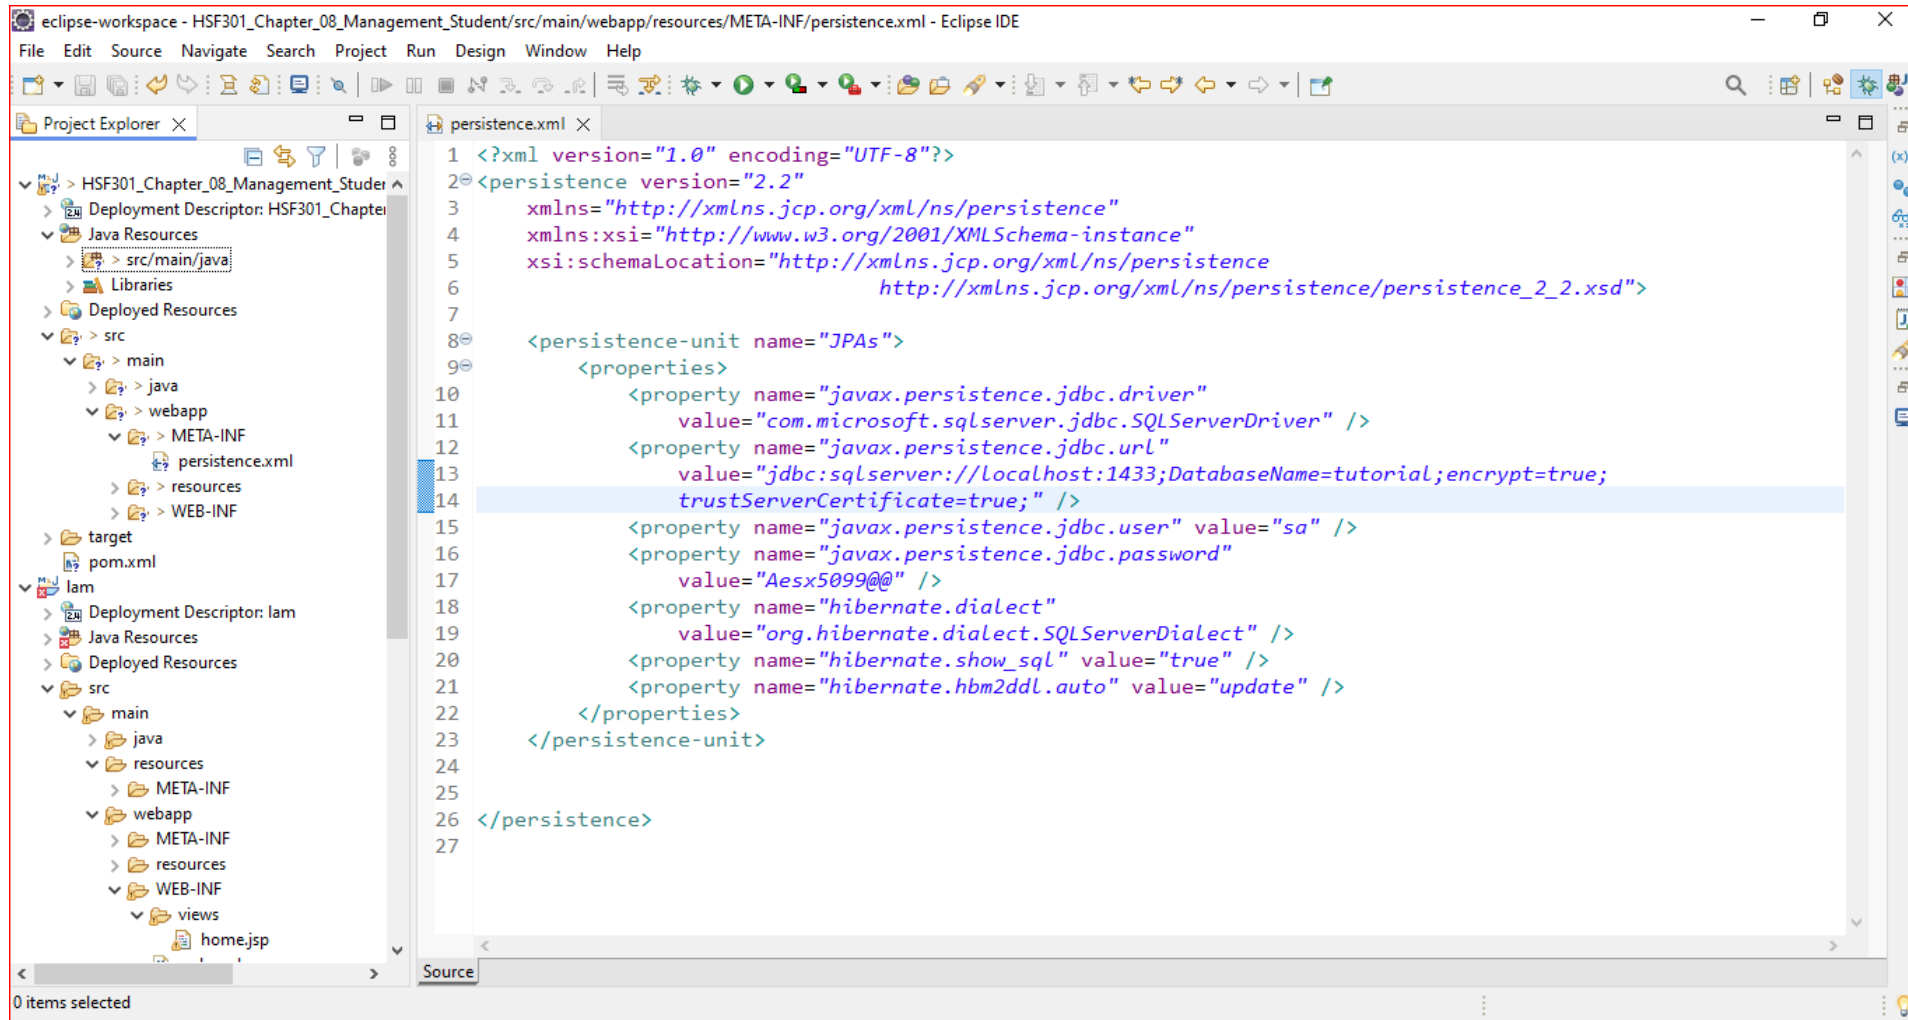

# 11. Edit pom.xml

```

68     <scope>provided</scope>
69   </dependency>
70
71   <!--Add Hibernate!-->
72   <dependency>
73     <groupId>org.eclipse.persistence</groupId>
74     <artifactId>javax.persistence</artifactId>
75     <version>2.2.0</version>
76   </dependency>
77   <dependency>
78     <groupId>org.hibernate</groupId>
79     <artifactId>hibernate-entitymanager</artifactId>
80     <version>5.6.9.Final</version>
81   </dependency>
82   <dependency>
83     <groupId>com.microsoft.sqlserver</groupId>

91     <version>1.2</version>
92   </dependency>
93
94   <!--End DAO!-->
95 </dependencies>
96
97 <repositories>

```

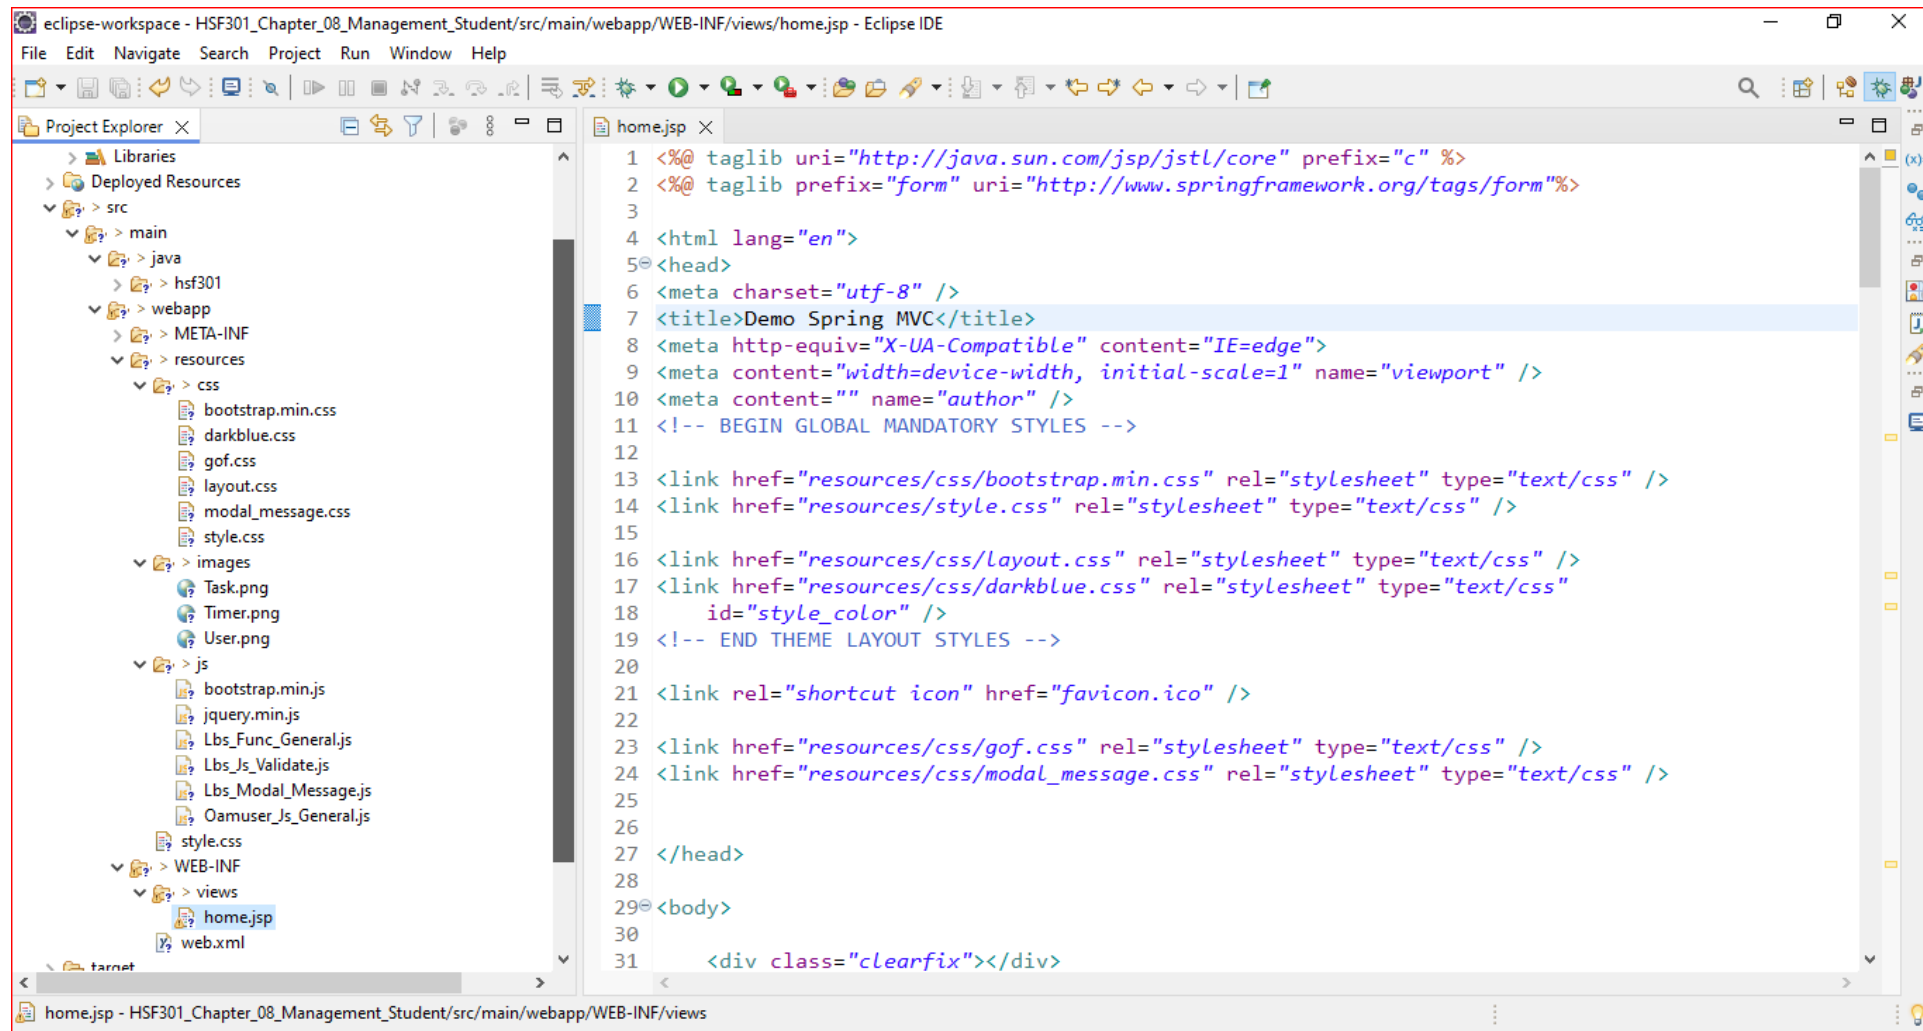

## 12. Create META-INF and persistence.xml File

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays the project structure for 'HSF301\_Chapter\_08\_Management\_Student'. The 'src/main/webapp/META-INF' directory is expanded, showing the 'persistence.xml' file. The main editor window displays the content of 'persistence.xml', which is an XML file defining persistence properties for a Java Persistence API (JPA) application. The file includes namespace declarations, a schema location, and a persistence unit named 'JPAs' with various properties for database connection and Hibernate configuration.

```
1 <?xml version="1.0" encoding="UTF-8"?>
2 <persistence version="2.2"
3   xmlns="http://xmlns.jcp.org/xml/ns/persistence"
4   xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
5   xsi:schemaLocation="http://xmlns.jcp.org/xml/ns/persistence
6     http://xmlns.jcp.org/xml/ns/persistence/persistence_2_2.xsd">
7
8   <persistence-unit name="JPAs">
9     <properties>
10       <property name="javax.persistence.jdbc.driver"
11         value="com.microsoft.sqlserver.jdbc.SQLServerDriver" />
12       <property name="javax.persistence.jdbc.url"
13         value="jdbc:sqlserver://localhost:1433;DatabaseName=tutorial;encrypt=true;
14         trustServerCertificate=true;" />
15       <property name="javax.persistence.jdbc.user" value="sa" />
16       <property name="javax.persistence.jdbc.password"
17         value="Aesx5099@" />
18       <property name="hibernate.dialect"
19         value="org.hibernate.dialect.SQLServerDialect" />
20       <property name="hibernate.show_sql" value="true" />
21       <property name="hibernate.hbm2ddl.auto" value="update" />
22     </properties>
23   </persistence-unit>
24 </persistence>
27
```

# 13. Copy material into project

36
37     }
38
39     public Student(String firstName, String lastName, int marks) {
40
41         super();
42         this.firstName = firstName;
43         this.lastName = lastName;
44     }
45 }
  
```

The status bar at the bottom indicates 'Writable', 'Smart Insert', and the cursor position '120 : 1 : 2098'.

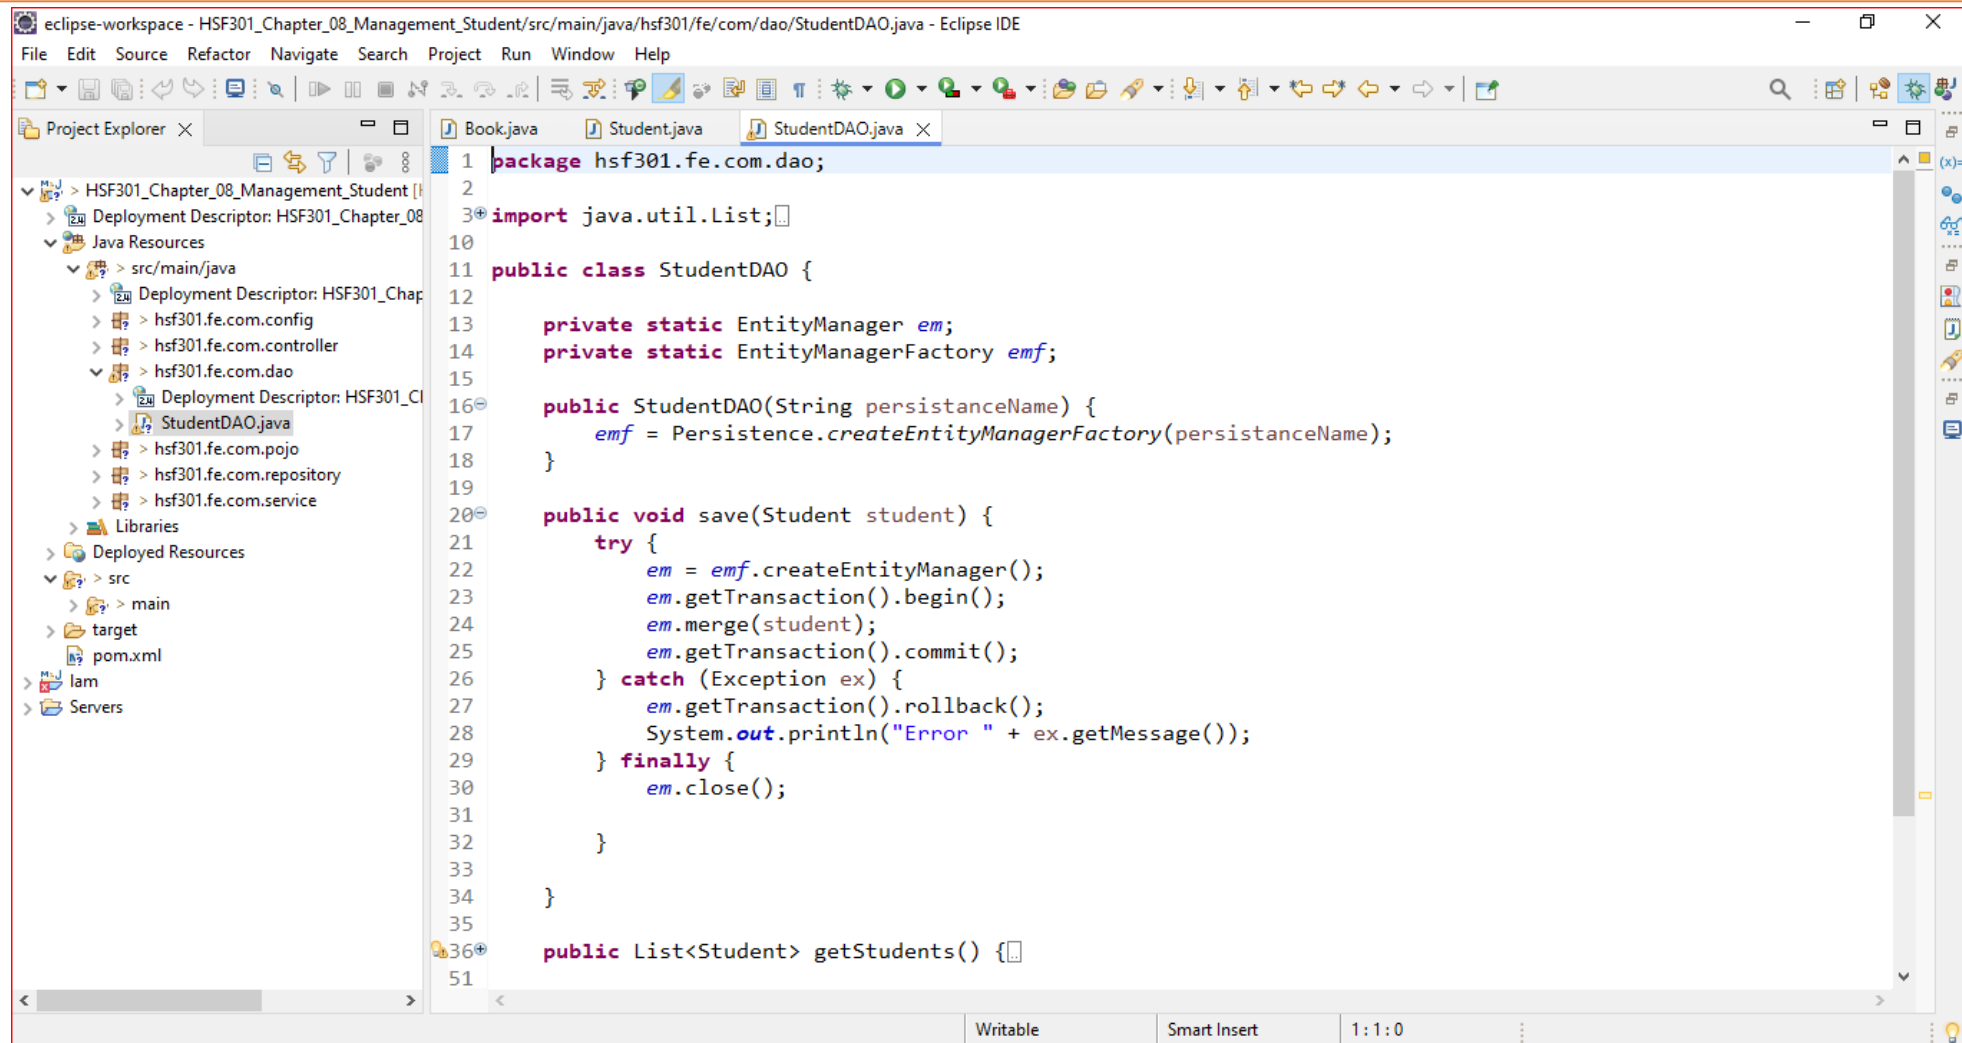

# 18. Create StudentDAO

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays the project structure for 'HSF301\_Chapter\_08\_Management\_Student'. The main editor window shows the code for 'StudentDAO.java'. The code defines a package, imports a utility class, and implements a DAO interface with methods for saving, retrieving, deleting, and updating students.

```
1 package hsf301.fe.com.dao;
2
3 import java.util.List;
4
5 public class StudentDAO {
6
7     private static EntityManager em;
8     private static EntityManagerFactory emf;
9
10    public StudentDAO(String persistenceName) {
11        emf = Persistence.createEntityManagerFactory(persistenceName);
12    }
13
14    public void save(Student student) {}
15
16    public List<Student> getStudents() {}
17
18    public void delete(int studentID) {}
19
20    public Student findById(int studentID) {}
21
22    public void update(Student student) {}
23 }
```

        hsf301.fe.com.repository
        hsf301.fe.com.service
      Libraries
      Deployed Resources
      src
        main
        target
      pom.xml
    lam
    Servers

13 private static EntityManager em;
14 private static EntityManagerFactory emf;
15
16 public StudentDAO(String persistenceName) {
17     emf = Persistence.createEntityManagerFactory(persistenceName);
18 }
19
20 public void save(Student student) {}
21
22 public List<Student> getStudents() {
23     List<Student> students = null;
24     try {
25         em = emf.createEntityManager();
26         em.getTransaction().begin();
27         students = em.createQuery("from Student").getResultList();
28     } catch (Exception ex) {
29         System.out.println("Error " + ex.getMessage());
30     } finally {
31         em.close();
32     }
33     return students;
34 }
35
36 public void delete(int studentID) {}
37
38 public Student findById(int studentID) {}
39
40 public void update(Student student) {}
41 }
```

## 21. Delete Student in StudentDAO

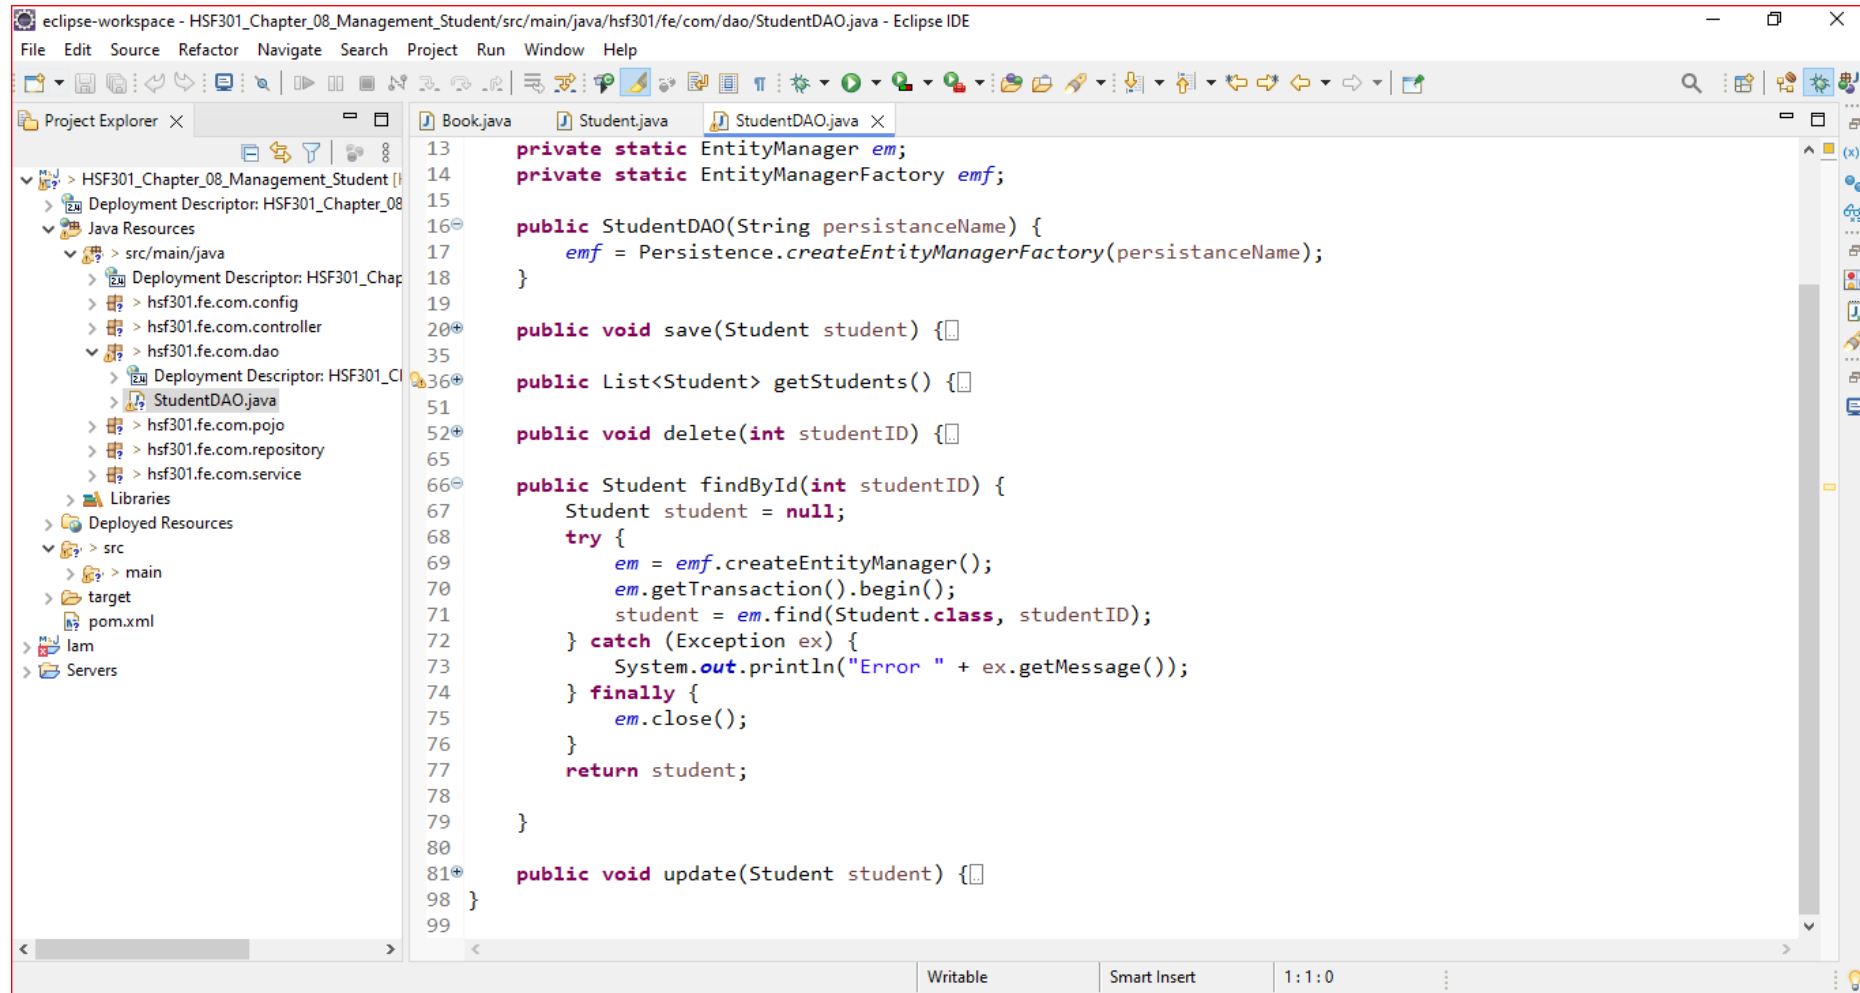

The screenshot shows the Eclipse IDE with the file `StudentDAO.java` open. The code implements the `delete` method, which uses JPA's `EntityManager` to remove a student by ID. The `try-catch-finally` block ensures the `EntityManager` is properly closed after the operation.

```
12
13 private static EntityManager em;
14 private static EntityManagerFactory emf;
15
16 public StudentDAO(String persistenceName) {
17     emf = Persistence.createEntityManagerFactory(persistenceName);
18 }
19
20 public void save(Student student) {}
21
22 public List<Student> getStudents() {}
23
24 public void delete(int studentID) {
25     try {
26         em = emf.createEntityManager();
27         em.getTransaction().begin();
28         Student s = em.find(Student.class, studentID);
29         em.remove(s);
30         em.getTransaction().commit();
31     } catch (Exception ex) {
32         System.out.println("Error " + ex.getMessage());
33     } finally {
34         em.close();
35     }
36 }
37
38 public Student findById(int studentID) {}
39
40 public void update(Student student) {}
41
42 }
```

## 22. Find A Student in StudentDAO

## 24. Create IStudentRepository

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays the project structure for 'HSF301\_Chapter\_08\_Management\_Student'. The main editor window shows the code for 'IStudentRepository.java'. The code defines a package, imports a utility class, and declares an interface with several methods.

```
1 package hsf301.fe.com.repository;
2
3 import java.util.List;
4
5
6
7 public interface IStudentRepository {
8     public List<Student> findAll();
9
10    public void save(Student student);
11
12    public void delete(int studentID);
13
14    public Student findById(int studentID);
15
16    public void update(Student student);
17 }
18
```

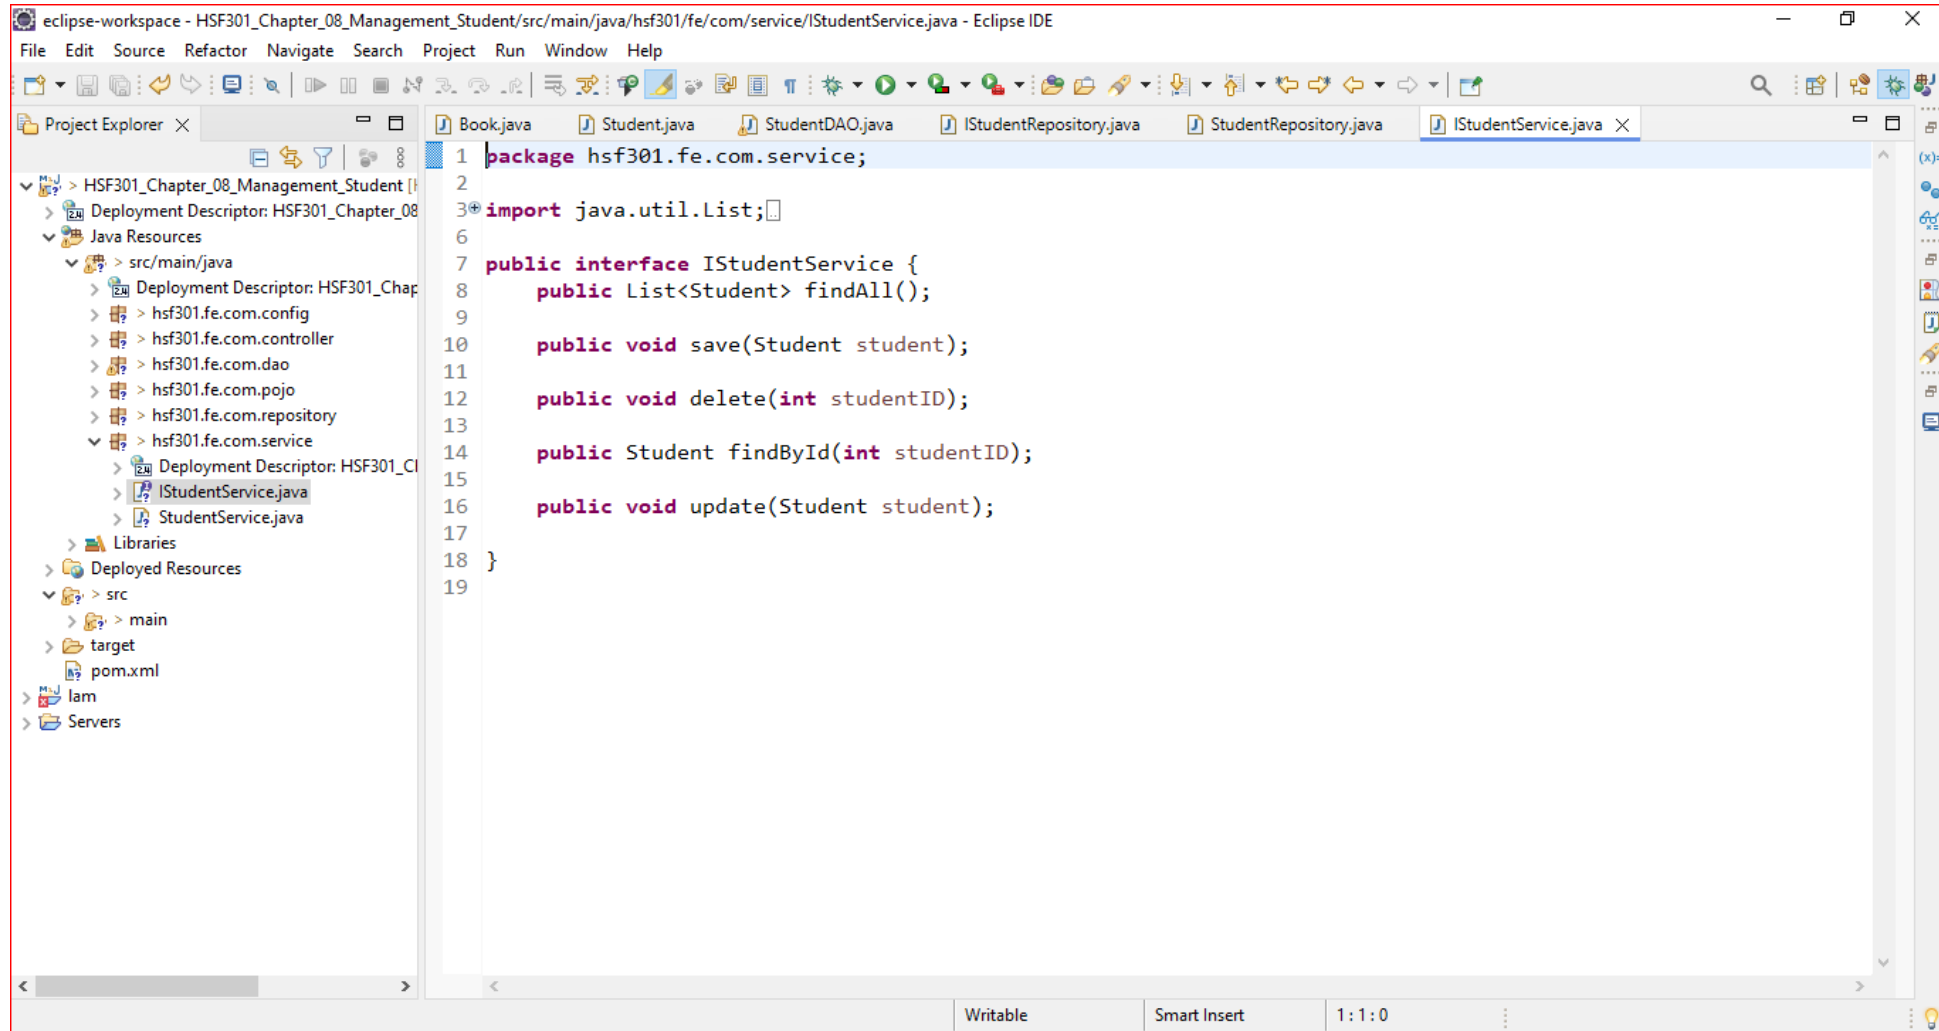

## 25. Create StudentRepository

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays the project structure for 'HSF301\_Chapter\_08\_Management\_Student'. The main editor window shows the code for 'StudentRepository.java', which implements the 'IStudentRepository' interface. The code includes a private field 'studentDAO' and several methods: 'StudentRepository(String fileConfig)', 'save(Student student)', 'findAll()', 'delete(int studentID)', 'findById(int studentID)', and 'update(Student student)'. The 'update' method is currently selected and highlighted in blue.

```
7 public class StudentRepository implements IStudentRepository {
8     private StudentDAO studentDAO = null;
9
10    public StudentRepository(String fileConfig) {
11        studentDAO = new StudentDAO(fileConfig);
12    }
13
14    @Override
15    public void save(Student student) {
16        // TODO Auto-generated method stub
17        studentDAO.save(student);
18    }
19
20    @Override
21    public List<Student> findAll() {
22        // TODO Auto-generated method stub
23        return studentDAO.getStudents();
24    }
25
26    @Override
27    public void delete(int studentID) {
28        studentDAO.delete(studentID);
29    }
30
31    @Override
32    public Student findById(int studentID) {
33        // TODO Auto-generated method stub
34        return studentDAO.findById(studentID);
35    }
36
37    @Override
38    public void update(Student student) {
39        studentDAO.update(student);
40    }
41}
```

## 26. Create IStudentService

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays the project structure for 'HSF301\_Chapter\_08\_Management\_Student'. The main editor window shows the code for 'IStudentService.java'. The code defines a package, imports a List, and declares an interface with five methods.

```
1 package hsf301.fe.com.service;
2
3 import java.util.List;
4
5
6
7 public interface IStudentService {
8     public List<Student> findAll();
9
10    public void save(Student student);
11
12    public void delete(int studentID);
13
14    public Student findById(int studentID);
15
16    public void update(Student student);
17
18 }
19
```

## 27. Create StudentService

# Summary

The concepts are introduced:

- ◆ Create a new Maven project in Eclipse IDE
- ◆ Add the necessary dependencies for Spring MVC and data access
- ◆ Create the Model - Define the entity classes that represent domain objects
- ◆ Define the data access object (DAO) interfaces and their implementations for interacting with the database.
- ◆ Create the Controller
- ◆ Set Up the Views
- ◆ Create the views using JSP, Thymeleaf, or another templating engine
- ◆ Implement the Business Logic
- ◆ Testing
- ◆ Run the Application
